BEHIND THE DESIGN

SPIRAL STAIRCASE

Radiating elegance and opulence, spiral staircases have swiftly emerged as a premier choice in building design! With its graceful curves and slender structure, the Organica staircase adds allure and character to the building, serving as the entrance and separate access to the Your Home Designs studio.

Apart from its grandeur and status as a focal point, the allure of this feature lies in its adaptability to confined spaces and diverse access requirements. The ability to install a staircase in areas previously deemed inaccessible can revolutionise spatial dynamics. Practicality? Absolutely. Aesthetics? Undoubtedly.

The staircase at Organica was prefabricated in Melbourne and meticulously installed, with Zoe actively assisting Tyson and the construction team. Constructed from galvanised steel and finished in a sleek white powder coat, precise execution was crucial to ensure perfect stair heights, requiring accurate planning and on-site measurements. Despite these demands, the installation was completed swiftly over two days.
