

DETAIL PLANS & 3DS

Interior Selections

To begin this stage, we integrate all of your selections into a detailed plan and create interior elevations.

After completing the elevations, we produce realistic 3D perspectives of the design. We love sharing this step with you all, as it really brings everything to life!

The next step is for us to fully detail the elevations so they are suitable for construction. This step is a game changer for Builders, as it saves a lot of back & fourth!

At the end of this stage, our Designer will liaise with your chosen builder about your concepts and all selections before handover.
